#### DB설계

#### ❖ 테이블 및 시퀀스 생성

```
create table boardtest(
no number primary key,
name varchar2(20),
subject varchar2(50),
content varchar2(1000),
register date
);

create sequence boardtest_seq;
```

## 환경 설정파일 수정(1/2)

❖ 환경 설정 파일 수정
main / resources / application.properties

```
# port
server.port=80
```

# prefix and suffix
spring.mvc.view.prefix=/WEB-INF/views/
spring.mvc.view.suffix=.jsp

❖ webapp / **WEB-INF / views** 폴더 생성

## 환경 설정파일 수정(2/2)

❖ 환경 설정 파일 수정
main / resources / application.properties

# oracle spring.datasource.hikari.driver-class-name=oracle.jdbc.OracleDriver spring.datasource.hikari.jdbc-url=jdbc:oracle:thin:@localhost:1521:xe spring.datasource.hikari.username=spring spring.datasource.hikari.password=spring123

#### DatabaseConfiguration 설정

❖ DatabaseConfiguration설정 파일 생성 /main/java/com/example/demo/configuration – DatabaseConfiguration.java (1/2)

```
@Configuration
@PropertySource("classpath:/application.properties")
public class DatabaseConfiguration {
         @Autowired
         private ApplicationContext applicationContext;
         @Bean
         @ConfigurationProperties(prefix = "spring.datasource.hikari")
         public HikariConfig() {
                  return new HikariConfig();
         @Bean
         @ConfigurationProperties(prefix = "mybatis.configuration")
         public org.apache.ibatis.session.Configuration mybatisConfig() {
                  return new org.apache.ibatis.session.Configuration();
```

#### DatabaseConfiguration 설정

❖ DatabaseConfiguration설정 파일 생성 /main/java/com/example/demo/configuration - DatabaseConfiguration.java (2/2)

```
@Bean
public DataSource dataSource() {
          DataSource dataSource = new HikariDataSource(hikariConfig());
          return dataSource;
@Bean
public SqlSessionFactory sqlSessionFactory(DataSource dataSource) throws Exception {
          SqlSessionFactoryBean sqlSessionFactoryBean = new SqlSessionFactoryBean();
          sqlSessionFactoryBean.setDataSource(dataSource);
          sqlSessionFactoryBean.setMapperLocations(
                    applicationContext.getResources("classpath:/mapper/*.xml"));
          sqlSessionFactoryBean.setConfiguration(mybatisConfig());
          sqlSessionFactoryBean.setTypeAliasesPackage("com.example.demo.model");
          return sqlSessionFactoryBean.getObject();
@Bean
public SqlSessionTemplate sqlSessionTemplate(SqlSessionFactory sqlSessionFactory) {
          return new SqlSessionTemplate(sqlSessionFactory);
```

#### DTO 생성

❖ DTO 생성 main / java / com / example / demo / model – Board.java

```
@Getter
@Setter
@Alias("board") // DTO 클래스 alias 설정
public class Board {
       private int no;
       private String name;
       private String subject;
       private String content;
       private Date register;
```

#### Controller 생성

#### ❖ Controller 생성

/main/java/com/example/demo/controller - BoardController.java

```
@Controller
public class BoardController {
            @Autowired
            private BoardService service;
            @RequestMapping("boardform")
            public String main() {
                   return "boardform";
            @RequestMapping("boardInsert")
            public String boardInsert(Board board) {
                   int result = service.boardInsert(board);
                  return "redirect:boardlist";
            @RequestMapping("boardlist")
            public String boardlist(Model model) {
                        List < Board > list = service.boardlist();
                        model.addAttribute("list", list);
                        return "boardlist";
```

#### Service 생성

❖ Service 생성

/main/java/com/example/demo/service - BoardService.java

```
@Service
public class BoardService {
        @Autowired
        private BoardDao dao;
        public int boardInsert(Board board) {
                return dao.boardInsert(board);
        public List<Board> boardlist() {
                return dao.boardlist();
```

#### Dao 생성

Dao 생성

```
/main/java/com/example/demo/dao – BoardDao.java
```

```
@Repository
public class BoardDao {
        @Autowired
        private SqlSession session;
        public int boardInsert(Board board) {
                 return session.insert("insert", board);
        public List<Board> boardlist() {
                 return session.selectList("list");
```

#### mapper 생성

❖ mapper 생성

```
main / resources / mapper – board.xml
```

```
<mapper namespace="boardns">
   <insert id="insert" parameterType="board">
     insert into boardtest values(boardtest_seq.nextval,#{name},#{subject},#{content},sysdate)
   </insert>
   <select id="list" resultType="board">
       select * from boardtest
   </select>
</mapper>
```

## Mybatis의 환경설정파일

❖ Mybatis의 환결설정파일 생성

DTO 클래스의 Alias가 mapper 파일에서 적용안됨

main / resources - mybatis-config.xml

#### View 생성

#### ❖ View 생성

webapp - index.jsp 생성

```
<@ page language="java" contentType="text/html; charset=UTF-8"
  pageEncoding="UTF-8"%>
<!DOCTYPE html>

```

# myBatis02 project를 gradle로 만들어 보자?

## myBatis02 project 생성

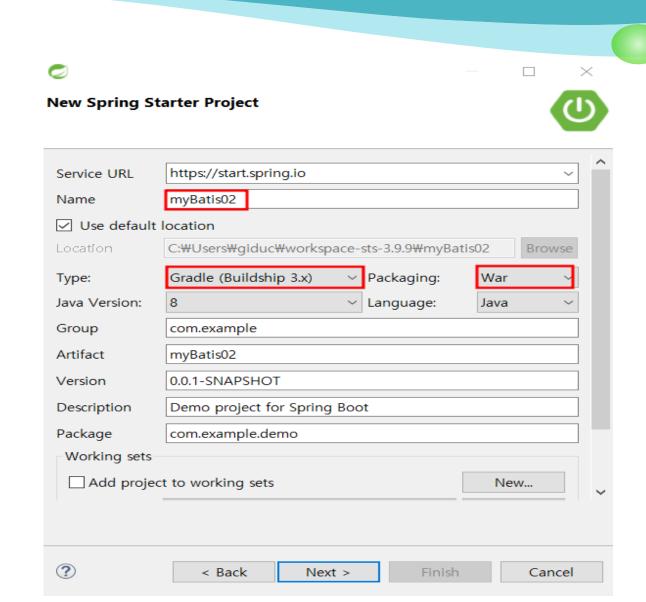

❖ myBatis02 project 생성

[File] - New - Project

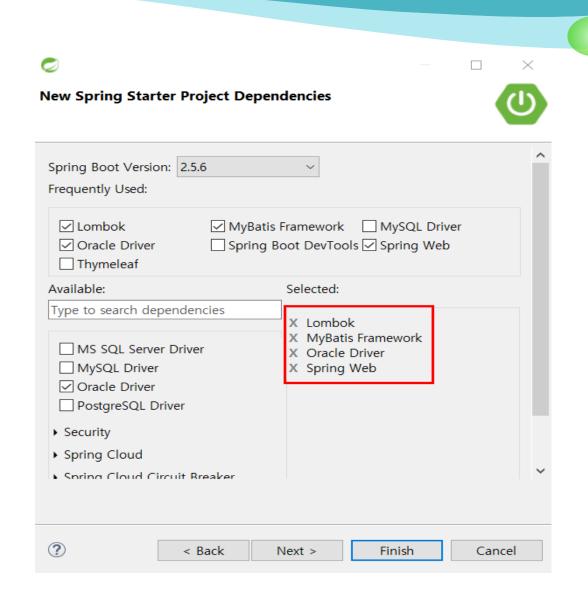

## myBatis02 project 생성

- ❖ myBatis02 project 생성
- Name: myBatis02
- > Type : Maven, Gradle
- Packaging: War, Jar

### myBatis02 project 생성

- ❖ myBatis02 project 생성
- > Web Spring Web 체크
- SQLMyBatis Framework 체크Oracle Driver 체크
- Developer ToolsLombok 체크

#### Gradle 환경설정

**Gradle** 의 환경설정 파일에 의존 라이브러리 추가 myBatis02 - build.gradle dependencies { // jsp implementation 'org.apache.tomcat.embed:tomcat-embed-jasper' // JSTL implementation 'javax.servlet:jstl' implementation 'org.springframework.boot:spring-boot-starter-web' implementation 'org.mybatis.spring.boot:mybatis-spring-boot-starter:2.3.0' compileOnly 'org.projectlombok' runtimeOnly 'com.oracle.database.jdbc:ojdbc8' annotationProcessor 'org.projectlombok:lombok' providedRuntime 'org.springframework.boot:spring-boot-starter-tomcat' testImplementation 'org.springframework.boot:spring-boot-starter-test'

### myBatis02 실행

- ❖ myBatis02 실행
- 1. myBatis01 project 내용을 모두 myBatis02로 복사한다.
- 2. myBatis02 project를 내부 Tomcat으로 실행한다.
- 3. 웹브라우저로 접속한다.

http://localhost/boardform

http://localhost/boardlist
